

About Roofing Materials

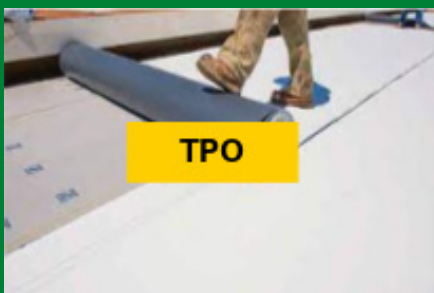

Shingle roofs are the most popular roofing material because they are low maintenance and cost effective. They are available in different colors to maximize your curb appeal.

Metal roofs are known for their longevity and energy efficiency. And of course they stand up well to hurricane force winds.

Tile and specialty roofs add a high value touch to any structure. Typically these materials are heavy and durable and a good choice to stand up to the hot Florida sun.

Thermoplastic Polyolefin. This material works well at resisting dirt build up and can save money over the long run in cleaning. Suitable mostly for commercial buildings.
